Available: 3/7/2005

Photo and assembly drawings are available at : [www.cellset.com/voxset2.html](http://www.cellset.com/voxset2.html)

Description of Model: *VoxSet2* can be installed on any motorcycle with an intercom system. It was designed to mute the passenger and rider microphones in the absence of voice. The unit has a variable squelch level to increase or decrease the amount of audio required to un-mute the microphone.

Its microprocessor controller allows the user to set the squelch level either using the bike's OEM CB Push To Talk (PTT), or an aftermarket PTT (if no two way radio is installed). If an aftermarket two way radio is installed, the same PTT that keys the radio must activate *VoxSet2*.

An optional rider intercom harness is available to squelch noise from the rider headset microphone

Its design is modular, allowing it to connect to a variety of intercom systems. Refer to our web site to choose the appropriate *VoxSet2* Intercom Harness and *VoxSet2* PTT Harness. A variety of PTT's are available if none currently exist on the bike.
