

PRODUCT RELEASE ANNOUNCEMENT

KENNEDY TECHNOLOGY GROUP

RELEASE DATE: 08/30/07 - Part #65341R0

Market: Touring Motorcycle

Product: *CellSet, MC/GPS-AUX/ICS*

Part number: 95445

MSRP: USD95.00

Description: This device allows the user to connect multifunction GPS devices with stereo output, (but no mic input for cell phone) such as the Garmin 2730 and Zumo 450 to a variety of bike audio systems. It allows the user to switch the GPS's audio between the bike's intercom and auxiliary audio input.

This switching features allows users to enjoy the GPS stereo music, and hear alert audio through the auxiliary audio system. If the user then wants to listen to the bike's AM/FM radio, this model allows him to switch the GPS audio to the intercom. Any GPS alert audio will then be present in the intercom system.

This unit uses the same switch assemblies, aux audio, power, and intercom harnesses that the *CellSet, MC/GPS* series uses.

Assembly drawings can be viewed at : www.cellset.com/MultiGPS.html
